

Konica Minolta DocNet System Information

Konica Minolta's DocNet system is an Electronic Document Management System (EDMS) that allows complete customization of Metadata fields as per each customer's requirements. DocNet can store any type of electronic file including but not limited to the following:-

Scanned Documents - TIFF, JPG, PDF
Photo or Image Files – JPG, BMP, TIFF, GIF, PNG
MS Office Files – DOC, XLS, PPT
CAD Files – DWG, DXF
Movie Files – AVI, VOB, MPG, QTM
Audio Files – WAV, MP3
Archive Formats – ZIP, ARJ, RAR

DocNet will also store executable files and programming files, anything that can be stored on a PC can be stored in DocNet and indexed for easy retrieval.

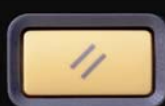

The DocNet system is built using the Java programming language and runs on the J2EE platform. All necessary components will be provided in the installation disks. The standard DocNet installation uses the MySQL relational database management system (RDBMS) with the connection provided by Java Database Connectivity (JDBC) driver.

The following information is required for the installation:

- A fixed IP address for the DocNet server
- Subnet mask of network
- IP address of the Gateway of network
- Internet connection for online registration
- Primary and Secondary DNS server IP address
- SMTP Server Address
- FAX line (If optional FAX module installed)

The above information is required during the online registration process. Note that once the DocNet server is registered, your serial number can only be used on that machine.

The standard installation of DocNet server supports either the Microsoft Windows or the Linux operating system. For the Windows version, you will need to provide a properly installed computer with the Microsoft Windows operating system installed. If you choose for the Linux version, the default installation disk will install a customized Linux 9.0 OS automatically, so all you have to provide is a working computer.

Server requirements

Server Software requirements

The Konica Minolta DocNet server must comply with the following software specifications:

- DocNet dedicated server
- Microsoft Windows 2003 Server, 2000 Professional or Server SP4
- Microsoft Internet Explorer 5.5 SP2 or above
- Adobe® Acrobat® Reader 5.0
- Adobe® SVG Viewer 3.0

Server Hardware requirements

It is recommended that the Konica Minolta DocNet server complies with the following hardware specifications:

- Processor: Pentium 4® 2GHz CPU
- Memory: 512Mb RAM (1Gb recommended)
- Hard disk: Minimum 160GB (mirrored drives highly recommended)
- 10/100 mbps TCP/IP network
- CD-ROM drive required
- Internet connection

Workstation requirements

Workstation software requirements

The following clients are supported:

Pentium® III 500MHz CPU

128MB RAM

TCP/IP network

Microsoft Internet Browser 5.5 or above

Adobe® Acrobat® Reader 5.0

Adobe® SVG Viewer 3.0

Network requirements

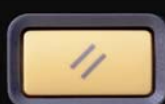

- TCP/IP (IPv4) network environment is supported for either 10 Mbps or faster
